Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                10102: contig of 10102 bp in length

The sequence may be contaminated with foreign sequence from E.ooli, yeast, vector, phage, etc.

The nucleotide sequence of this BAC clone was generated by combining Monsanto and Genoscope sequencing data.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ij

Genes were predicted from the integrated results of the following:
GENSCANI.0, BLASTN2.0, BLASTX2.0 as well as SplicePredictor

(October 1998 version). The genomic sequence was searched against

NCDI NonRedundant Protein database, nr (ftp://ncbi.nlm.nih.gov/blast/db) and the cDNA sequence database at

RGP. Protein homologyse of the coding regions were searched against

NCDI NonRedundant Protein database with BLASTP2.0. ESTS represent

the identified cDNA sequences using BLASTP 2.0 with the

corresponding DDBJ accession no. and RGP clone ID.

A gene with identity or significant homology to a protein is

classified based on the protein name to indicate the homology level

such as same name, 'putative-' and '-like protein'. A gene without

significant homology to any protein but with BST homology to any protein in

slings the entire length of partial sequence) is classified as an

'unknown' protein. A gene predicted with a gene prediction program

is classified as a hypothetical' protein.

A gene redicted with a gene prediction program

is classified as a hypothetical' protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  PLN 21-MAR-2002

This sequence of P0698H10 clone has an overlap with P0518C01 (DDBJ: AP003277) clone at the position 1 to 80,700 of 5' end and with P0459B04 (DDBJ: AP003627) at the position 103,811 to 153,449 of 3' end. Detailed information on overlap and assembly quality together with annotation of this entry is available at http://rgp.dna.affrc.go.jp/GenomeSeq.html.

A gene with identity or significant homology to a protein is classified based on the protein name to indicate the homology level such as same name, 'putative-' and '-like protein.' A gene without significant homology to any protein but with EST homology (covering almost the entire length of partial sequence) is classified as an 'unknown' protein. A gene predicted with a gene prediction program is classified as a 'hypothetical' protein.

The orientation of the sequence is from SP6 to T7 of the PAC clone.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CDS
                                                                                                                                                                                                                                                                                                                                                                                                   Genes were identified by a combination of several methods: Gene prediction programs including Genscan and Genscan (Chris Burge, http://CCR-081.mlt.edu/GENSCAN.html), GeneMarkHaM (Mark Burge, http://CCR-081.mlt.edu/GENSCAN.html), GeneMarkHaM (Mark Burge, http://genemark.biology.gatech.edu/GeneMark/), Figenesh (http://genemark.biology.gatech.edu/GeneMark/), Figenesh (http://www.softberry.com/), and GeneSplicer (Mihaela Pertea and Steven Salzberg, contact mpertea@tigr.org), searches of the complete sequence against a peptide database and the plant EST database at TiGR (http://www.tigr.org/tdb/tdi.shtml). Annotated genes are named to indicate the level of evidence for their annotation. Genes with similarity to other proteins are named after with EST similarity are named as unknown proteins Genes without proteins ones without protein or EST similarity, that are predicted by more than two gene prediction programs over most of their length are annotated as hypothetical proteins. Genes encoding tRNAs are predicted by hypothetical proteins dense sencoding tRNAs are predicted by ENAscan-SE (Sean Eddy, thtp://genome.wustl.edu/eddy/FRNAscan-SE); Simple repeates are identified by repeatmasker (Arian Smit, http://erearcan.edu/eddy/FRNAscan-SE);
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GI:4803672 (Homo sapiens)"

* NOTE: This sequence version replaced gi:18767489.

* NOTE: This Sequence The Contigs.
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submittor.

* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.

* 1 10516 10615 contig of 10355 bp in length
* 23448 23771: contig of 10355 bp in length

It currently consists of 7 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that it provided by the submittor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              611 others
